

Ubisoft Privacy Policy Analysis

Date Agreed: January 2018

Data Collection Practices

Ubisoft organizes collection by *purpose* rather than by category. Account creation (username, password, email, DOB, country), gameplay/telemetry (levels, rewards, playtime, crash/bug data), cross-progression identifiers, social-feature data (chat, voice, UGC, avatars), purchase data (kept up to 10 years for tax/audit purposes), Web3/crypto-wallet data for applicable titles, and customer-support data. Each purpose is paired with its specific legal basis (contract performance, consent, legitimate interest, or legal obligation), the clearest legal-basis mapping of any policy reviewed, reflecting GDPR's Article 6 structure directly.

Data Sharing Policies

Shared with: Ubisoft subsidiaries/studios/affiliated labels (Ketchapp, Green Panda Games, Kolibri Games); service providers (payment, moderation, fraud prevention, bound by a "Supplier Code of Conduct"); community developers/competitive-gameplay tool partners; distribution/first-party partners (Sony, Microsoft, Steam); third-party login providers (Facebook/Google); advertising partners; other players/public audiences (leaderboards, streamed matches, forums); and administrative/judicial authorities. Ubisoft is also explicit that reCAPTCHA Enterprise (Google) protects its services, disclosing that specific sub-processor by name.

User Rights

Full GDPR-style rights list: access/portability, rectification (self-service for several fields), erasure (with a clear, blunt warning that account deletion is irreversible and forfeits game libraries/progress), objection, restriction, and complaint. A dedicated **Family Section** adds COPPA-aligned protections: Child Accounts (7+) linked to a parent's account with monthly activity reports, and Teen Accounts (age of consent-18) with added protections the most developed minors' privacy framework among the 9 services.

Opt-Out Provisions

- Centralized "Privacy Center - Manage your choices" hub covers newsletters, personalization, ad partner data sharing, and social preferences in one place better UX than Amazon's or Meta's scattered settings pages.
- Explicit opt-out of "sale"/targeted advertising per CCPA/state laws, with step-by-step instructions for website, account, and mobile-game settings.
- Honors Global Privacy Control (GPC) signals as either a Do-Not-Sell or a limit-sharing request; states it does **not** honor legacy Do Not Track.
- Publishes real CCPA metrics (request volumes, denial counts, response times for 2022-2023) the only policy reviewed that discloses actual compliance statistics.

Summary

Attribute	Rating
Transparency of collection practices	High (organized by purpose + legal basis)
Sharing disclosure	High (names specific sub-processors)
User rights clarity	High (includes strongest minors' protections in the set)
Opt-out ease	High (single Privacy Center hub, GPC honored)
Update transparency	High (matched live version; discloses real compliance metrics)
